

NEXT STEPS

Today's event is part of a series of public consultations intended to provide information to the community and gather feedback about the draft proposals for the Cossans Solar & BESS Development.

Your comments will be gratefully received and will help improve the quality of our final project design, including proposed hedgerow planting and biodiversity enhancement, and inform related proposals for a Community Benefit Fund.

We plan to continue our consultation with second local exhibition early next year, before submitting our application. The second exhibition will show information on the final project design and the results of studies that went into this.

This will also be the time when the local community and stakeholders can provide feedback on this process and their thoughts on the final project prior to submission.
